

ENVARIABELS ANALYS DEL 2

SEMINARIUM 11: ROTATIONSVOLYMER

Området D roterar ett varv kring x-axeln.

$$D = \{(x, y) : y = f(x), a \leq x \leq b\}$$

Rotationsbelopp då D roterar kring x-axeln.

$$dv = \text{basens area} \cdot \text{höjden} = \pi r^2 \cdot dx =$$
$$= [r = f(x)] = \pi (f(x))^2 dx$$

ALLTSA

$$\int dv = \int \pi (f(x))^2 dx$$

$$V = \int_a^b \pi (f(x))^2 dx$$

Rotation
kropp
x-axeln

Ex: Området mellan x-axeln och kurvan $y = \ln(x)$, $1 \leq x \leq e$

roterar ett varv kring x-axeln.

Bestäm den uppkomna kroppens volym

Lösning:

- Rita området.

ANVÄND FORMEL

$$V = \int_1^e \pi (f(x))^2 dx = \pi \int_1^e (\ln(x))^2 dx$$

- Partiell integration

$$\left[\begin{array}{l} u = (\ln(x))^2 \quad u' = 2 \ln(x) \cdot \frac{1}{x} \\ \downarrow \text{klar} \quad \swarrow \text{klar} \\ v = x \quad v' = 1 \end{array} \right]$$

$$= \left[(\ln(x))^2 x \right]_1^e - \int_1^e 2 \ln(x) \cdot \frac{1}{x} \cdot x \cdot dx$$

$$= \pi \left((\ln(e))^2 e - (\ln(1))^2 \cdot 1 - \int_1^e 2 \ln(x) dx \right)$$

$$= \pi \left(e - 2 \int_1^e \ln(x) dx \right) - \left[u = \ln(x) \quad u' = \frac{1}{x} \right]$$

$$= \pi \left(e - 2 \left(\left[\ln(x) x \right]_1^e - \int_1^e \frac{x}{x} dx \right) \right)$$

$$\pi(e - 2(\ln(e) \cdot e - \ln(1) \cdot 1 - \int_1^e 1 dx))$$

$$= \pi(e - 2(e - [x]_1^e)) =$$

$$\pi(e - 2(e - (e - 1)))$$

$$= \pi(e - 2(e - e + 1))$$

$$= \pi(e - 2(1)) = \pi(e - 2)$$

SVAR

$$V = \pi(e - 2) \underline{\underline{V \cdot e}}$$

EX KLOTETS VOLUME, då radien = R

ENNETS Cirkeln

$(\cos \theta, \sin \theta)$

Radier liksom mer ser
den ej den är 1

$(R \cos \theta, R \sin \theta)$

Fran Pythagoras här
 $x^2 + y^2 = R^2$

Circus equation

$x^2 + y^2 = R^2 \Leftrightarrow y = \pm \sqrt{R^2 - x^2}$

+ är huvucirkel (positiv)

Volumen blir då ———— || ———— (negativ)

$V = \int_a^b \pi (f(x))^2 dx = 2 \int_0^R \pi (R^2 - x^2) dx$

$$\begin{aligned}
 &= 2\pi \int_0^R (R^2 - x^2) dx = 2\pi \left[R^2 x - \frac{x^3}{3} \right]_0^R \\
 &= 2\pi \left(R^3 - \frac{R^3}{3} - (0 - 0) \right) = 2\pi \left(R^3 - \frac{R^3}{3} \right) \\
 &= 2\pi \left(\frac{3R^3}{3} - \frac{R^3}{3} \right) = 2\pi \cdot \frac{2R^3}{3}
 \end{aligned}$$

SVAR:

$$\boxed{V = \frac{4\pi R^3}{3}} \quad V \cdot c$$

Rör-formeln

ω (område) rotterar ett
varu kring y-axeln.

Bestäm den uppkomna kroppens volym.

Cylindern är alltid
i hållig

ANSA

OBS, $r = x$!

$$dV = 2\pi r \cdot dA = 2\pi r f(x) dx$$

Eftersom cylindern är i hållig kan
det bilda en rektangel

Formel:

$$V = \int_a^b 2\pi \times \underbrace{f(x)}_{\text{höjden}} \underbrace{dx}_{\text{bredden}}$$

Ex: Beräkna volymen av den kropp
 som uppstår då området
 $0 \leq y \leq x^2 e^{-x^2}$, $x \geq 0$, raderas ett
 varv kring y-axeln.

Lösning:

Sc: $y = x^2 e^{-x^2} = \frac{x^2}{e^{x^2}}$ då $x \rightarrow \infty$ går $y \rightarrow 0$.
 (enligt hastighetstabellen).

Enligt formeln för volymen

$$V = \int_a^b 2\pi x \, dA = \int_a^b 2\pi x f(x) \, dx$$

Obs $dA = f(x) dx$

$$= \int_0^w 2\pi x x^2 e^{-x^2} \, dx = \left[\begin{array}{l} -x^2 = t \\ -2x dx = dt \\ x dx = -\frac{1}{2} dt \\ \text{nåa variabler nya gränser} \\ \text{om } x=0 \text{ blir } t=0 \\ \text{om } x=w \text{ blir } t=-w^2 \\ t=-w^2 \rightarrow -\infty \text{ by } w \rightarrow \infty \end{array} \right]$$

$$= \int_0^w 2\pi x^3 e^{-x^2} \, dx =$$

$$= \int_0^b 2\pi(-t) e^t \left(-\frac{1}{2}\right) dt$$

$$= \int_0^b \pi t e^t \, dt = \left[\begin{array}{l} u = \pi t \quad v' = e^t \\ v = e^t \quad v' = e^t \end{array} \right] \left[\begin{array}{l} t=b \text{ blir } 0 \rightarrow -\infty \\ \text{erhållet } t \text{ men något annat} \end{array} \right]$$

$$= \left[\pi t e^t \right]_0^b - \int_0^b \pi e^t \, dt = \left[\pi t e^t \right]_0^b - \left[\pi e^t \right]_0^b$$

$$= \pi b e^b - \pi \cdot 0 \cdot e^0 - (\pi e^b - \pi e^0) =$$

$$= \pi b e^b - \pi e^b + \pi$$

tyg $b \rightarrow -\infty$ blir

$$V = \lim_{b \rightarrow -\infty} (\pi b e^b - \pi e^b + \pi)$$

$$= \lim_{b \rightarrow -\infty} \left(\pi \frac{b}{e^{-b}} - \frac{\pi}{e^{-b}} + \pi \right) = \pi \cdot 0 - 0 + \pi$$

enligt standard gränsvärden

$$= \pi \quad \underline{\text{SVAR:}} \quad V = \pi \quad \text{v. e}$$
